

Kiddies Town ECD & Academy

Client User Guide — how to use the portal | 30/08/2026

Welcome

Kiddies Town is a web-based school-management portal for an early childhood development centre. It brings the whole school community into three private workspaces — one for parents, one for teachers, and one for the school administration — accessible from any modern browser (Chrome, Edge, Safari). All personal data is handled with POPIA-aligned privacy practices.

Logging In

Open the portal URL and choose your workspace. Each role has a separate login:

WORKSPACE	WHO USES IT
Parent	Moms, dads and guardians
Teacher	Classroom teachers and assistants
Admin	Principal / school administration

Demo logins: parent · parent@kiddiestown.co.za — teacher · teacher@kiddiestown.co.za — admin · admin@kiddiestown.co.za (all passwords match the role name, e.g. `parent`).

What You Can Do In Each Workspace

Parent

- View your child's profile, class and contact details
- Read progress reports with milestone scores and teacher remarks
- See the notice board, event calendar and RSVP to events
- Browse the classroom journal (photos & highlights)
- Check fees, payments and receipts
- Update your household / family profile
- Message the teacher in the chat portal
- Change your password

Teacher

- Mark attendance for your class and update individual student status
- Submit the daily attendance register to administration
- Plan lessons from the weekly themes & home-learning guides
- Assess learner milestones across 10 developmental tracks
- Publish quarterly progress reports
- Post classroom journal photos for parents
- Reply to parent messages

Admin

- Overview of enrolment pipeline and fee arrears
- Approve & onboard enrolment applications (auto-places the child in a class)
- Student directory with instant search
- Enroll a new student manually
- Send bulk parent notifications and arrears warnings

- Staff roster, calendar planner, transport & logistics desk
- System audit log — a full trail of actions

Enrolment (New Families)

1. Open the portal and choose "**Enrol a Child**" from the public menu.
2. Complete the wizard: child details, parent details, medical profile, transport needs, consents.
3. Submit — the application lands in the Admin **Enrolment Pipeline** as *Pending Approval*.
4. Admin reviews and clicks **Onboard**; the child is added to the directory, placed in a class, a registration-fee record is created, and parents receive a welcome.

Demo tip: the on-screen application review (Step 6) is skipped by the wizard's auto-submit. This is cosmetic; the application is submitted correctly from Step 5.

Fees & Payments

The admin can verify payments and send an arrears warning to parents with outstanding accounts. Parents see their invoice status, receipt numbers and due dates in the **Fees** tab.

Resetting Demo Data

An admin can restore the original demo dataset at any time through `POST /api/admin/reset-db` (used at the end of every QA run to leave the school data pristine).

Expectations & Limits

- The API rate limit is 100 requests per 15 minutes per IP — normal usage is far below this; automated stress-testing may need the limit raised or the server restarted.
- Email notifications are simulated in this demo build (bulk emails record recipients rather than sending mail).
- Screenshot evidence of every feature can be found in the accompanying *UI Test Report* PDF.

Support

For technical deployment, credentials rotation, or the source handover, refer to the *Technical Handover Pack* and the project `README.md`.
